Identifying and Defining Components of Computer

1 Time :00-99:59 [min:sec]

A.

2 Energy consumption 0-9999 Full kilometers
[Odometer] [0-9999 km]

3 Speed 0-99.9 [KM/H]
Distance 0-99.9 [KM]

4 Pedal Frequency 20-199 [Revolutions/min] Pedal Revolutions

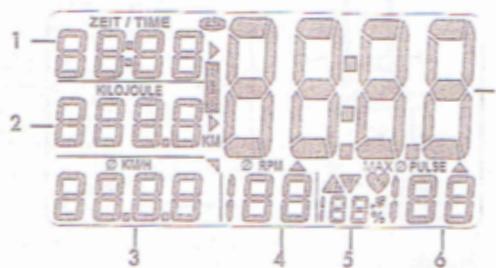

5 Percent
Relationship: current pulse rate - maximum pulse

6 Pulse 50-199 [beats/min]

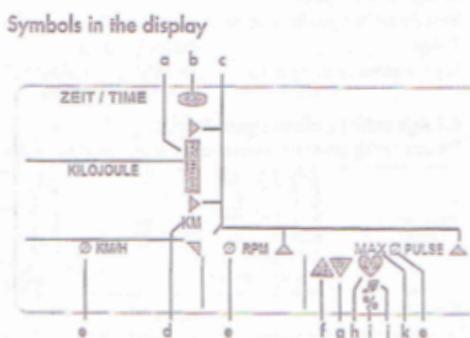

7 Large display Room temperature [0-40 degrees]
fitness-grade [F1.0-F6.0]

See Figure B.

B.

C.

Symbols

a REC Recovery pulse

b SCAN Automatic display change

c ARROW Current area in the large display

d KM Full kilometers

e Average Beat frequency + pulse

f LO Lower than the lower pulse value

g HI Higher than the higher pulse value

h Heart blinks intact with the pulse

i Percent % of maximum pulse specification

j Grade Acoustic maximum pulse supervision

k MAX Exceeding the maximum pulse

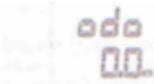

See Figure C.

D.

Picture 4

Keys:

Minus key Lower value (display range back)

Set key Function key (specification, change, reset of the display)

Plus key Increase values (display range up)

Recovery key Function key (fitness grade determination)

Attachment (front)

Connector For the ear clip

Attachment (back)

Connector (4 pole) for the hand pulse sensors (not with racer and crossbike)

Connector (2 pole) for the speed recorded

Battery compartment 2 batteries: Mignon 1.5 Volt, LR6, AA

See Figure A on page 2. (Previous Page)

1.0 Display before exercising

- | | |
|---------------------|---|
| 1. Room temperature | Picture 1 (before and after exercising) |
| 2. Full display | Picture 2 (after pedaling or pushing button, 1 sec) |
| 3. Full kilometer | Picture 3 (length of display: 10 seconds or key) |
| 4. Start Display | Picture 4 |

See Figure D. on page 2. (Previous Page)

Recording pulse with the hand pulse sensors
The hands cover the hand pulse sensors.

Recording pulse with the ear clip
Plug the ear clip in the connection
Rub on earlobe to improve the circulation
Put the ear clip on the earlobe

Pulse display

You have adjusted the start display (Picture 4)
The heart symbol (h) blinks in tact with your pulse
After a few seconds, the pulse is shown as a value

3.0 Exercising without specification of exercise data

setting time (1) kilojoule (2) distance (3) and pulse (6). You have set the start display (Picture 4). Press the set key, enter the setting mode and set the desired values with the + or - keys.

If you press the +/- key longer, the value will go back to OFF. With the set key, you will reach the next settings.

After the pulse setting, leave the setting mode with the set key and see the display with the possible settings (Picture 16/17)

Press the set key longer and the display will go to the full display (reset function) (Picture 2)

Note

If you do not enter a setting value within 4 minutes, the display will go to room temperature (Picture 1)

Picture 5: The time setting begins with "OFF"

Picture 6: Time setting e.g. 18 minutes

Picture 7: Energy consumption setting: e.g. 270 Kilojoule

Picture 8: Distance setting: e.g. 10KM

Picture 5

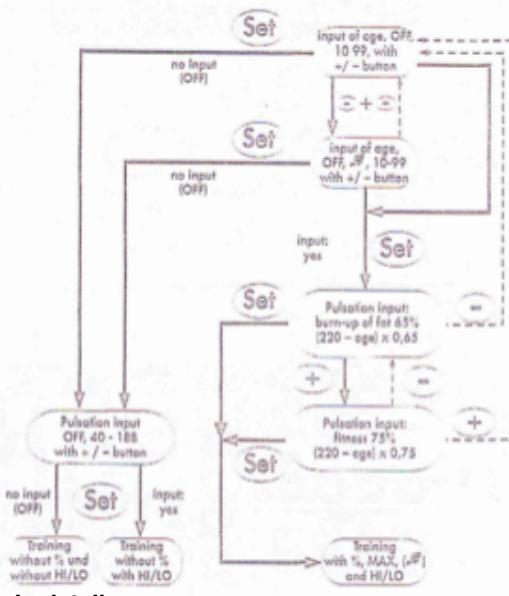

Picture 6

Picture 7

Picture 8

Pulse setting possibilities
The scheme shows the course of the pulse settings

In detail:

Setting- exercise pulse

With the set key, you have access to 2 setting areas:

-Age (Picture 9/10)

-Pulse zones: Burning of fat

4.1 Age setting /alarm signal ON/OFF

The agesetting serves for the calculation of your maximum pulse.

Picture 9

Picture 10

The right exercising pulse

The exercising pulse depends on age and exercise goal. For each age and exercise goal there is a suggested range which is designated by an upper and lower pulse limit (+/- 10 beats). The exercise pulse should always be within the aerobic zone. The maximum pulse frequency (220-age) may not be exceeded.

When you enter your age, in the PULSE display (6) there will be a maximum pulse which depends on the age [Formula: 220-age]. (Picture 11). With settings up to 21 years, only 199 can be displayed as a maximum pulse but the right value will be calculated.

4.0 Pulse Zones

With the +/- keys, you select 2 zones. The age setting serves for the calculation of these pulse zones. This is visible with the #'s display.

1. Burning of fat
Formula: $(220=\text{age}) \times 0.65$
2. Fitness Zone
Formula: $(220-\text{age}) \times 0.75$

Function

Through the setting of the pulse zones and the assumed maximum pulse, a pulse zone supervision is activated. If the set exercise pulse falls short of 11 beats, the display shows "LO", if 11 beats are exceeded, "HI." The "LO" supervision is active if first the given exercise pulse is reached while pedaling. If the rotation number falls below 20, the "LO" function becomes active again when the given exercise pulse has been reached. The "HI" supervision is always active.

If the maximum pulse is exceeded by 1 beat "HI" will blink and "MAX" appears. If the acoustic alarm is active, you will be able to hear the alarm signal. The value which is displayed with the #'s symbol is the comparison between current pulse value and maximum pulse value.

4.1 Pulse Supervision

This setting is possible in the area from 40-188 with the +/- keys.

Function

The "HI" and "LO" display functions are described in 4.2.

The proportional pulse display as well as the acoustic alarm function are not available.

4.2 Finishing the Settings

After the last setting, if you press the set key, your setting values (except for pulse setting) will be displayed.

If you have activated a pulse zone, the comparison between the current pulse value and the maximum pulse value or "—" with missing pulse signal will be shown.

If your pulse beat exceeds the entered pulse limit or your maximum pulse exceeds it, first the HI and then the MAX symbol will be displayed.

5.0 Displaying While Exercising

When you start exercising, in 5 second tact an automatic display change SCAN will begin. With the set key, you can shut it off. With the +/-keys you can then jump forward or back a display area.

6.0 Display before exercising, with breaks in the exercising, end

If you make less than 20 pedal rotations/min, the electronics recognize a break in the exercising. An automatic display change stops. The SCAN symbol disappears. Below KM/H, RPM, pulse, the average symbol and the average value is displayed.

If you do not continue exercising within 4 minutes, the display changes to room temperature. In doing so the distance is added in full kilometers. All other values are not stored.

Note

Speed and distance change in 5-second intervals.

With the +/- keys, you can jump forward or back one display area.

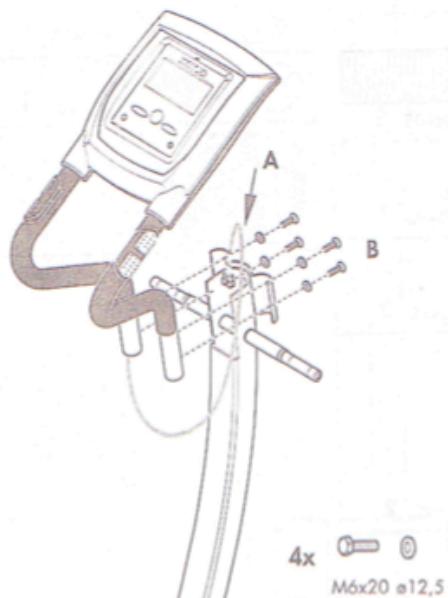

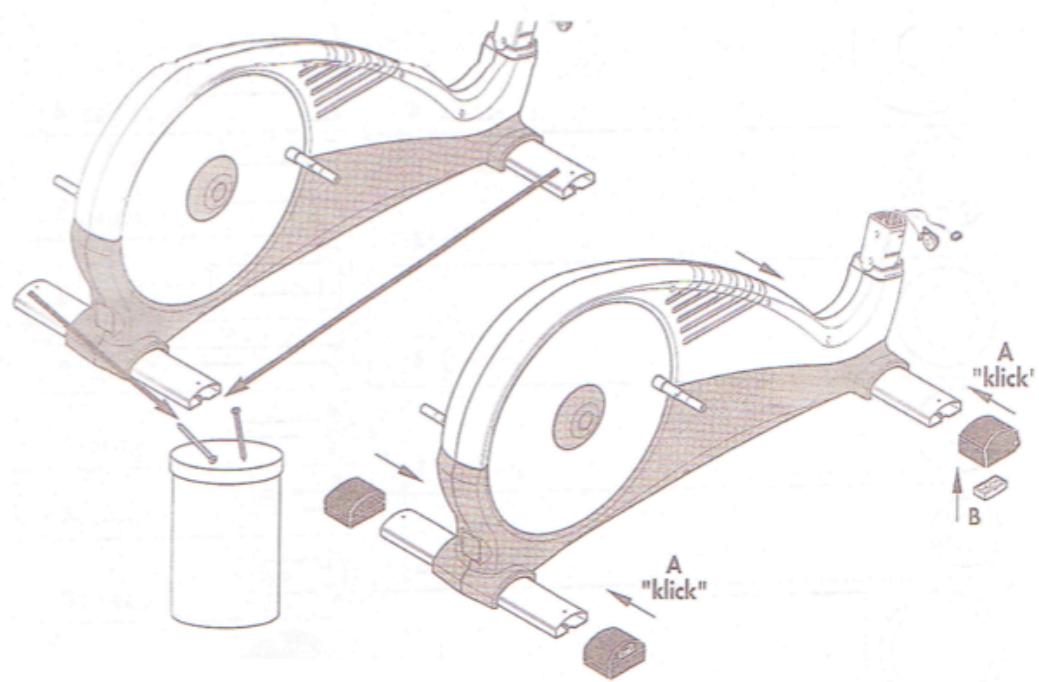

With the set key you return to the setting mode. In doing so, all previous exercise data will be deleted. Settings remain.

7.0 Display when continuing exercising

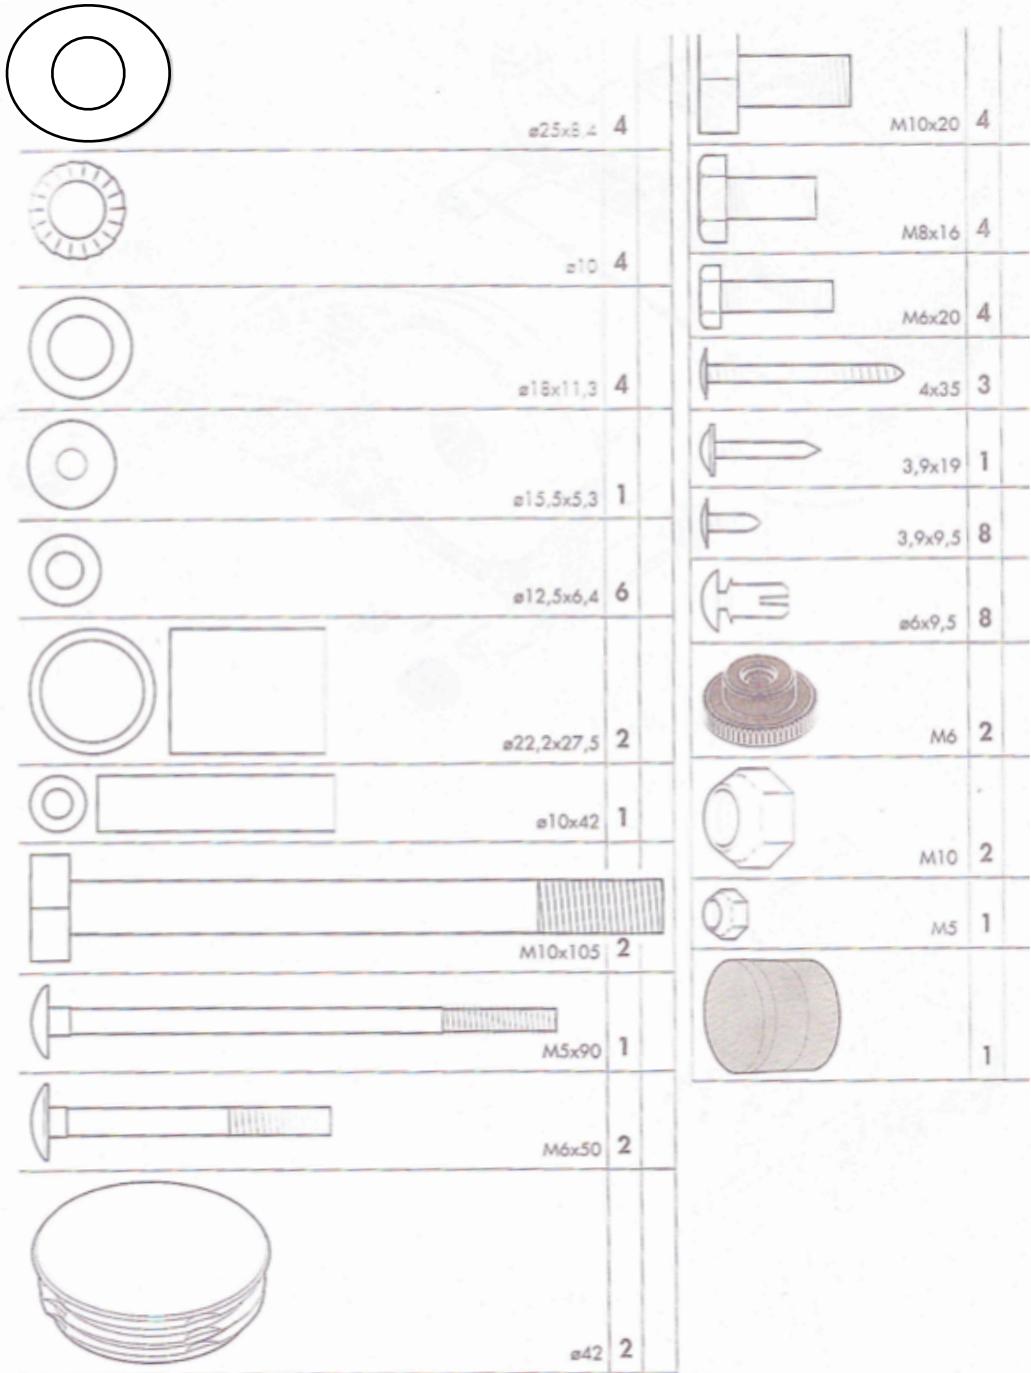

Start exercising again. The values continue to count.

8.0 Measuring recovery pulse

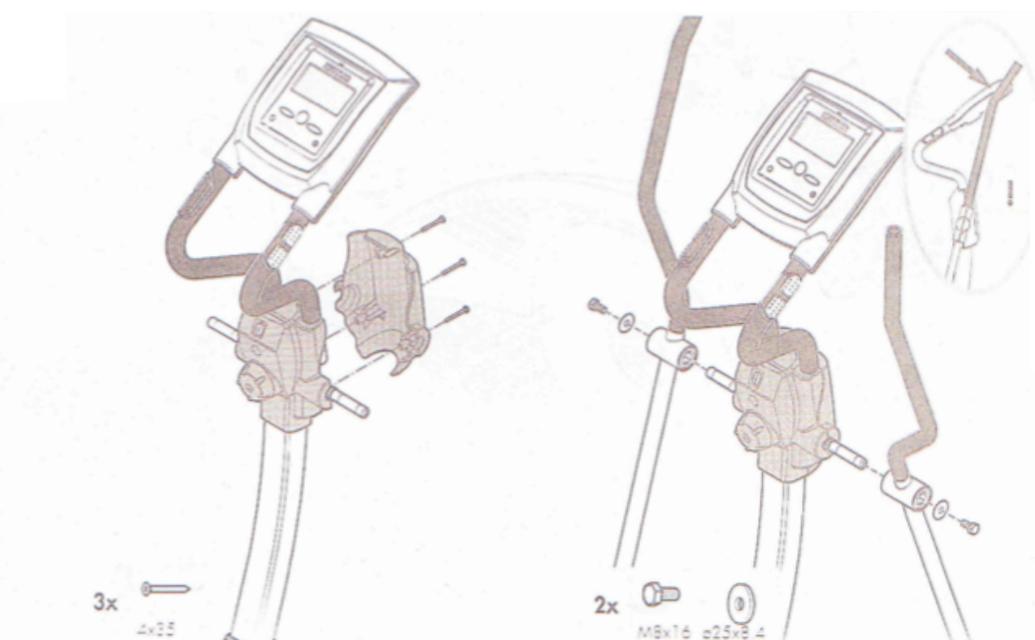

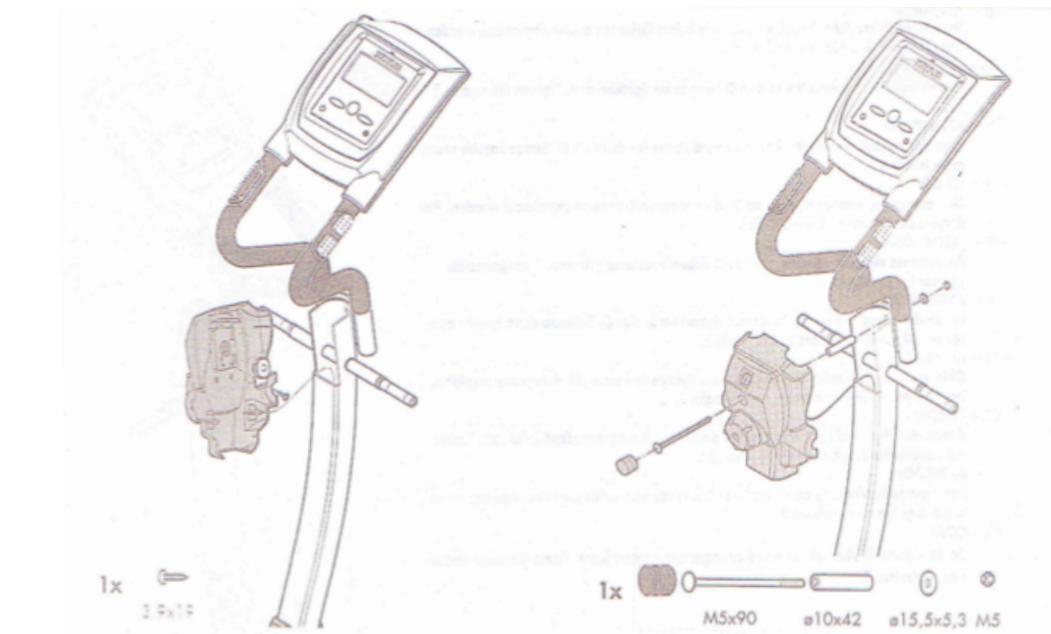

The exercise computer is equipped with a recovery pulse function. This makes it possible to measure your recovery pulse when you finish exercising. When you finish exercising, press the recovery key. The current pulse value is taken over under Time. The computer measures your pulse during a 59 seconds countdown. Afterwards, the current pulse value is taken over under kilojoules and under KM/H. The difference of the pulse values within the return are given and a fitness grade is displayed with (F). The calculation is explained under 9.0 general. If the measurement of the pulse is interrupted, instead of a value (P) is displayed. If you press the recovery key, the current exercise display will appear again. The current pulse is always shown under Pulse.

- D - ACHTUNG!
Die beiden Schrauben D müssen aus technischen Gründen zuerst angezogen werden.
Erst dann die Schrauben E anziehen.
- GB - IMPORTANT!
Due to technical reasons the screws D have to be tightened first. Tighten the screws E last.
- F - ATTENTION!
Pour des raisons techniques il faut d'abord serrer les deux vis D. Serrez ensuite seulement les vis E.
- NL - LET OP!
Om technische redenen moeten de beide schroeven D eerst vastgedraaid worden. Pas daarna de schroeven E vastdraaien.
- E - ¡ATENCIÓN!
Por razones técnicas, los dos tornillos D deben apretarse primero. A continuación apretar los tornillos E.
- I - ATTENZIONE!
Per motivi tecnici è necessario serrare dapprima le due D. Soltanto dopo questa operazione si possono serrare anche le viti E.
- PL - UWAGA!
Obie śruby z podkładką D muszą być z przyczyn technicznych dokręcone najpierw.
Dopiero potem dokręcić śruby z podkładką E.
- CZ - POZOR!
Z technických důvodů je třeba nejprve dotáhnout šrouby označené jako „D“. Teprve poté dotáhněte šrouby označené jako „E“.
- P - ATENÇÃO!
Por motivos técnicos, os dois parafusos D têm ser apertados primeiro. Apertar somente em seguida as parafusos E.
- DK - OBSI!
De to skrue D skal af tekniske årsager strammes først. Først derefter spændes skruerne E.

Battery Change

A weak or an extinguished computer display makes a battery change necessary. The computer is equipped with two batteries.

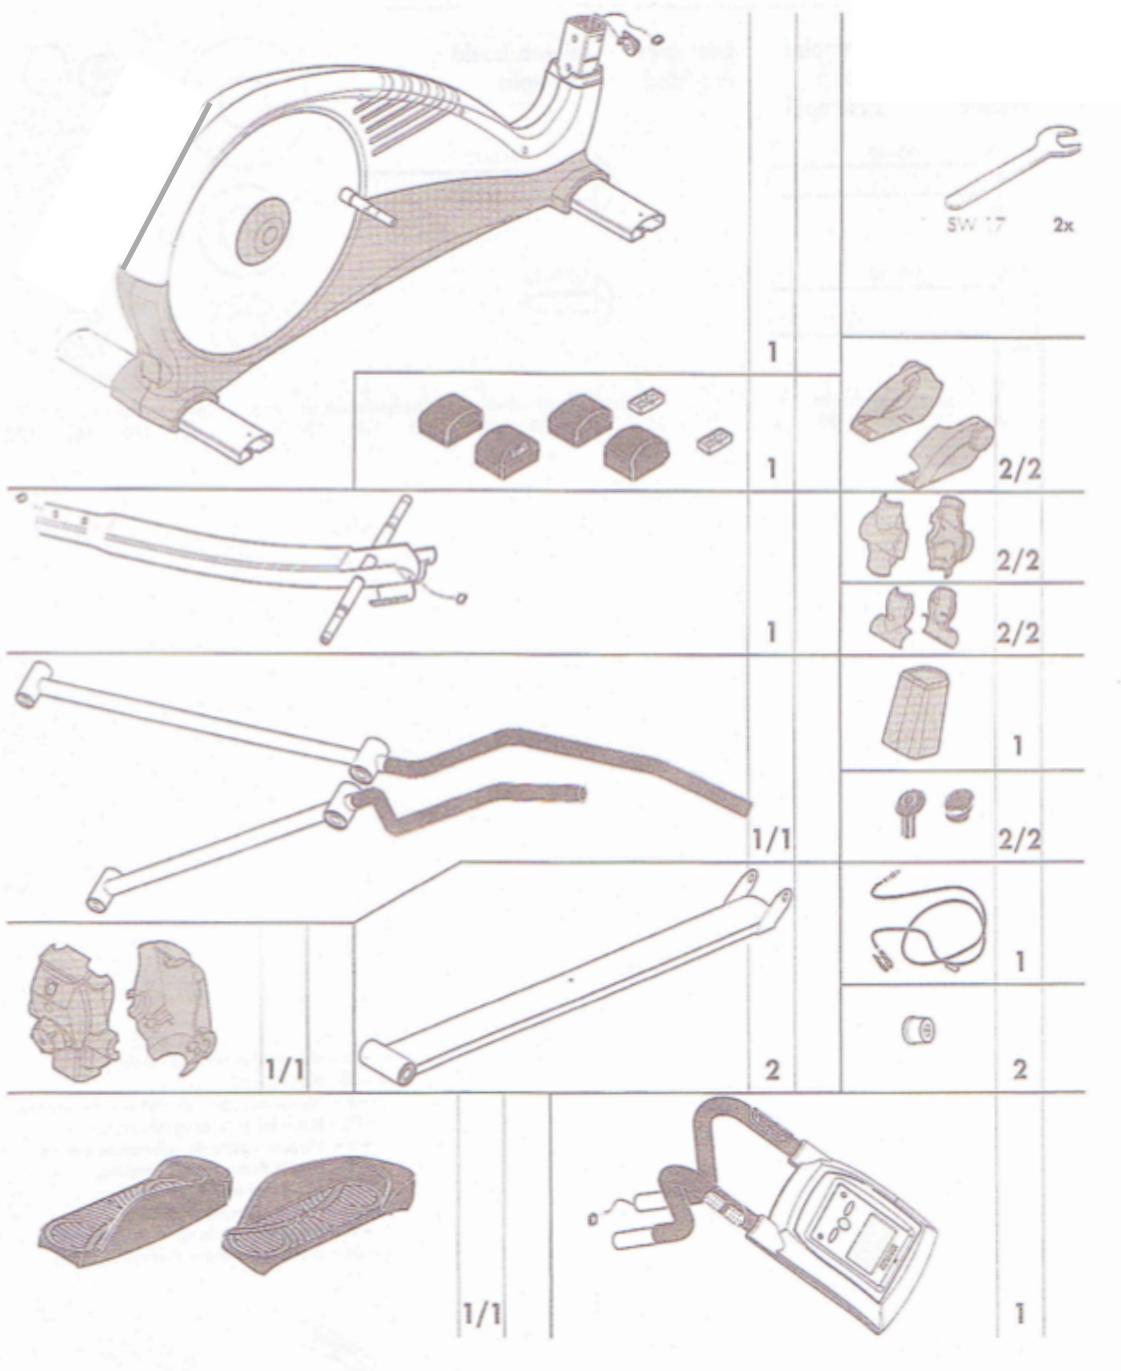

Perform the battery change as described below:

*Remove the lid of the battery compartment and replace the batteries by two new batteries of type AA 1,5V

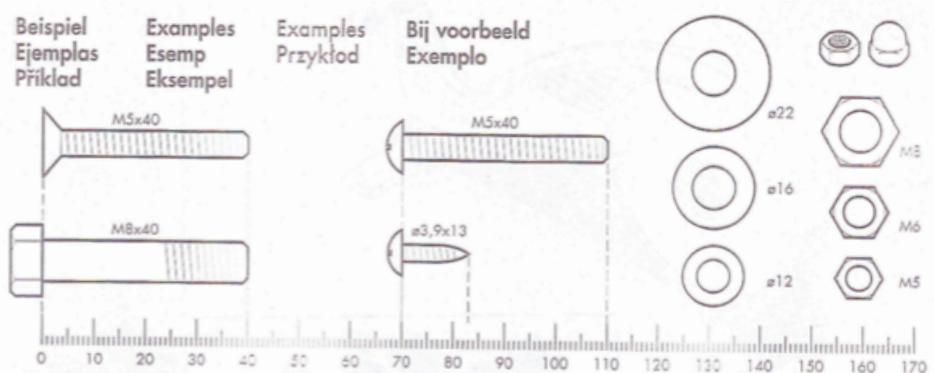

*When inserting the batteries pay attention to the designation on the bottom of the battery compartment.

*Should there be any misoperation after switching on the computer again, shortly disconnect the batteries once again and reinsert them.
